GCC market performance - Oct'10

Market review:

All of the GCC markets except KSA continued their positive note in October. For the month the KSE was +2.93%, Saudi -1.88%, Dubai +3.19%, Abu Dhabi +6.34%, Oman +0.74%, Qatar +2.04%, and Bahrain +1.05%.

During October, trading activity was dictated by improved investor confidence supported by a return of significant movements in Merchant banking and corporate Finance activity in the region. The markets have shown considerable amount of steam and a careful approach needs to be taken, several stocks identified as growth and operational may currently be overvalued after the recent market rally. The Fund managers have adopted the S&P GCC Composite price index as the previous index the MSCI GCC Index had stopped their coverage of the Saudi markets from October.

Fund review:

The Al-Ahli Gulf Fund recorded a gain of +0.265% MTD and a gain of +8.055% YTD. The S&P GCC Composite Price Index gained +1.54% MTD and +8.44% YTD mainly due to the Saudi weight factor of the index. The Gulf Funds gain since inception stood at +75.758%, the NAV of the fund was KD 0.892577 on the NAV date.

The fund manager shall continue to take into account the volatility of the region as a whole in deciding the asset mix and cash percentages this approach in turn has and will continue to reflect on the Fund's overall future performance. The current GCC allocations remain stable with a selective allocation of Blue Chip stocks across the region. The fund holdings are constantly monitored for the various risk factors by our investment team and appropriate action to rebalance the country allocation, cash percentages, as well as sector allocations is taken when needed.
